

An Internship Report

Of Cyber Job Simulation

Submitted

To

School of Computer Science and Engineering

IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of

B.Tech (Computer Science and Engineering)

By

Roll Number of Student: 2410031262

Name of Student: Anuj

Batch: 2024-2028

CANDIDATE'S DECLARATION

I, Anuj, do hereby declare that this report titled “Cyber Security Virtual Job Simulation” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering. All references have been duly acknowledged, and I have not used any material from any other source without proper citation.

I affirm that this report is my own work and has not been submitted to any other institute for any degree or diploma requirement, and I shall be solely responsible for any kind of copyright violation in this regard.

Signature:

Student Name: Anuj

Roll No: 2410031262

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to everyone who supported and guided me during the completion of this virtual job simulation. This experience allowed me to gain practical, self-paced exposure to real-world cyber security tasks in a structured, industry-informed format.

I am thankful to Forage for providing the online platform through which this job simulation was delivered, and to Deloitte for designing the practical tasks that formed the basis of this simulation. I am also thankful to my institute, IILM University, Greater Noida, and the faculty of the School of Computer Science and Engineering, for their continuous support and encouragement.

I express my gratitude to my parents for their blessings and support throughout this endeavour.

Signature:

Student Name: Anuj

Roll No: 2410031262

TABLE OF CONTENTS

CANDIDATE'S DECLARATION	2
ACKNOWLEDGEMENT	3
TABLE OF CONTENTS	4
3. Certificate of Completion.....	5
4. Project / Internship Description	6
4.1 Introduction	6
4.2 Organization and Platform Profile.....	6
4.3 Problem Statement	7
4.4 Objectives of the Simulation	7
4.5 Scope of the Simulation	7
4.6 Technologies, Concepts and Tools.....	8
4.7 Methodology	8
4.8 Tasks / Activities Completed	8
4.9 Learning Outcomes	9
4.10 Supporting Documents	9
5. Bibliography / References	10

3. Certificate of Completion

The certificate presented below was issued by Deloitte through the Forage virtual experience platform upon successful completion of the practical tasks comprising the Cyber Security Job Simulation. This document serves as verifiable proof of participation and completion.

4. Project / Internship Description

4.1 Introduction

This chapter presents a comprehensive account of the virtual job simulation undertaken by Anuj, a B.Tech Computer Science and Engineering student at IILM University, Greater Noida. The simulation, titled “Cyber Job Simulation,” was designed by Deloitte and delivered through the Forage virtual experience platform, which enables students to complete self-paced, practical, job-related tasks modelled on real work performed by employees at partner organizations.

According to the Certificate of Completion issued for this simulation, the practical tasks were completed over the period of August 2026, with the certificate itself dated August 29th, 2026. The certificate was signed by Tina McCreery, Chief Human Resources Officer, Deloitte, and issued by Forage, bearing an Enrolment Verification Code (6a929fdc2eef4b8fc0018ed1) and a User Verification Code (6a929e682eef4b8fc0015c3a) that can be used to authenticate the credential.

This chapter documents, in sequence, the organization and platform profile, the problem area addressed by the simulation, its objectives and scope, the tools and concepts associated with the cyber security domain, the methodology followed in a Forage-style virtual simulation, the tasks completed, the outcomes achieved, and the supporting certification.

4.2 Organization and Platform Profile

Deloitte is one of the world's largest professional services networks, providing audit, consulting, risk advisory, tax, and cyber security services to clients globally. As part of its outreach to students and early-career professionals, Deloitte partners with Forage, an online platform that hosts free, self-paced “job simulations” designed to replicate the type of tasks employees perform in a given role, without requiring a formal recruitment process or a live client engagement.

Key details relevant to this simulation, as evidenced by the certificate, are summarized below:

Simulation Title	Cyber Job Simulation
Designing Organization	Deloitte
Delivery Platform	Forage (virtual experience platform)
Domain / Practical Tasks	Cyber security
Period of Completion	August 2026
Certificate Issue Date	August 29th, 2026
Signatory	Tina McCreery, Chief Human Resources Officer, Deloitte
Enrolment Verification Code	6a929fdc2eef4b8fc0018ed1
User Verification Code	6a929e682eef4b8fc0015c3a
Mode of Internship	Virtual / Self-paced job simulation (online only)

Note: The certificate does not specify further organizational details such as office location or specific business unit; such details have therefore been left out rather than assumed.

4.3 Problem Statement

Organizations today face a continuously growing range of cyber security threats, including phishing, malware, data breaches, and unauthorized access attempts, which require professionals who can identify, analyze, and respond to security risks effectively. However, gaining exposure to how a real cyber security team approaches such problems is difficult for students through classroom study alone.

The Cyber Job Simulation was designed to address this gap by giving participants a set of practical, self-guided tasks modelled on the type of work performed by cyber security professionals at Deloitte, allowing learners to build applied understanding of the field in a virtual, risk-free environment.

4.4 Objectives of the Simulation

- Industry Exposure: To gain an understanding of the type of work performed by cyber security professionals at a global consulting firm.
- Domain Knowledge: To strengthen conceptual understanding of core cyber security principles and practices.
- Practical Application: To apply cyber security concepts to simulated, job-related practical tasks.
- Self-Directed Learning: To develop the ability to work through structured tasks independently, at one's own pace, in a virtual format.
- Professional Readiness: To build familiarity with the expectations and working style of a professional cyber security role.
- Documentation: To document the learning process and outcomes of the simulation in accordance with academic reporting standards.

4.5 Scope of the Simulation

The scope of this experience was defined by the practical tasks included in the Deloitte Cyber Job Simulation as hosted on the Forage platform. As this was a virtual, self-paced simulation rather than a live internship, the scope was limited to the completion of the simulation's structured practical exercises; it did not involve working with Deloitte's live systems, clients, or personnel, and did not involve any on-site, hybrid, or paid placement.

- Completion of self-paced practical tasks in the cyber security domain, as provided on the Forage platform.
- Application of foundational cyber security concepts within the simulation's guided exercises.
- Excludes: live client work, access to Deloitte's internal systems, on-site or hybrid placement, and any compensation or formal employment relationship.

[Information Required: Specific task titles/modules completed within the simulation (e.g., individual exercise names), if you would like them listed here individually]

4.6 Technologies, Concepts and Tools

As a cyber security-focused simulation, the practical tasks are generally associated with the following broad areas of knowledge and tools commonly used in the field. The specific tools used within Anuj's individual simulation tasks are not stated on the certificate and are marked accordingly.

Domain Area	Cyber Security
Delivery Platform	Forage virtual experience platform
Specific Tools/Software Used	[Information Required]
Specific Task Modules	[Information Required]

4.7 Methodology

Forage job simulations generally follow a self-paced, structured methodology consisting of the following stages, which were followed in the course of completing this simulation:

- 1. Orientation: Reviewing background material introducing the organization and the role-related context for the simulation.
- 2. Task Briefing: Reading the brief and requirements provided for each practical task.
- 3. Independent Work: Completing each task independently using the guidance and resources provided on the platform.
- 4. Self-Review: Comparing completed work against Forage's provided example solutions or guidance notes for feedback.
- 5. Progression: Moving sequentially through each task until all practical tasks in the simulation were completed.
- 6. Certification: Receiving the Certificate of Completion upon successful completion of all practical tasks.

4.8 Tasks / Activities Completed

The certificate confirms that practical tasks in the domain of Cyber Security were completed over the period of August 2026. The certificate does not enumerate the individual tasks by name; therefore, the specific list of activities is marked below for completion using details from the Forage platform or dashboard.

[Information Required: Detailed list of individual tasks/modules completed as part of the Cyber Job Simulation]

4.9 Learning Outcomes

- Foundational understanding of cyber security concepts as applied in a professional consulting context.
- Exposure to how a global professional services organization such as Deloitte approaches cyber security work.
- Improved ability to work independently through structured, self-paced learning tasks.
- Familiarity with virtual experience platforms as a mode of gaining industry exposure.
- Successful completion of the simulation's practical tasks, resulting in the award of a verifiable Certificate of Completion.

4.10 Supporting Documents

The Certificate of Completion reproduced in Section 3 of this report serves as the primary supporting document for this simulation. It can be independently verified using the Enrolment Verification Code and User Verification Code printed on the certificate.
